

# FREE METHODIST QUIZBOX

8/08

Tells 1st, 2nd, 3rd and 4th place out of 6 quizzers

**Quizbox Operation:** The quizbox will indicate who responded first by turning their first place light on and sounding a tone. When other quizzers respond, their lights will come on in 2nd, 3rd or 4th place as appropriate. The lights will stay on until the box is manually reset, or until all quizzers are seated (automatic reset).

**Team Size:** The quizbox is set up for 2 teams of 3. The left team is numbered 3 - 2 - 1 (red) and the right is 1 - 2 - 3 (green). If fewer than 6 are quizzing, simply unplug the unused seatpads.

**Seatpads:** Seatpads for the Free Methodist quiz program are available from Bob Mueller (rmueller@schnucks.com 681-467-5742). Clone seatpads (similar to Quiz-Time pads), handpads and pendant switches are available from Quiz Equipment, Inc.

**Accuracy:** The quizbox is accurate to 2 millionths of a second; however, after a quizzers jumps or sits back down, the quizbox requires up to 9 microseconds to process the change. Then it becomes accurate to the 2 microseconds again. To get a tie, quizzers would have to jump within 2 microseconds of each other, or both jump during the 9 microsecond window.

**Other Uses:** When auto reset is turned off, the quizbox will work for Jeopardy-style game shows and quiz bowls where a button is momentarily pushed to signal in. Auto reset is turned off by plugging a switch into the REMOTE RESET connector and holding it pressed while connecting power to the quizbox.

**Price:** The quizbox (without seatpads) is \$175.00, including shipping within the 48 states. Michigan churches must include their tax ID or pay sales tax. If this literature is more than one year old, please obtain the latest prices before ordering.

**Warranty:** 2 years on the quizbox; 1 year on the seatpads and AC adapter. Warranty does not cover cosmetic damage or failure due to abuse or user modifications.

**Payment:** Make checks payable to Quiz Equipment, Inc. Include a shipping address for UPS - not a PO Box.

**Power Supply:** Replacement AC Adapters can be purchased thru me or thru stores like Radio Shack. The quizbox requires 9 - 12 volts, AC or DC, either polarity, with 200 mA current (minimum). The connector is a 5.5 x 2.1 plug.
