

QUIZBAR

QUIZBOX SETUP

Power: Plug in the 12 volt adapter. The amber light above the jack illuminates when power is on. In an automobile, use an adapter to the lighter socket with a 5.5 x 2.1 plug on the other end of the cable. Radio Shack # 270-1533 will work fine. Polarity doesn't matter, as the Quizbar will work off of AC or DC voltage. Current required is 1/4 amp (250 mA).

Quizzers' Handpads: Plug as many as needed into the sockets on the back of the quizbox. Unused pads do not have to be plugged in.

Reset Handpad: Plug a handpad into the socket labeled "RESET".

QUIZBOX OPERATION

Reset: Push the reset handpad to clear the system. If quizzers are holding their handpads down during reset, one or more of their lights will come on after reset is released. Continue to push reset until all the quizzers have released their handpads.

Buzzing In: The first quizzer to press their handpad will have their light come on. The buzzer will sound and all other lights will be locked out until reset is pushed. The buzzer will not sound if quizzers push their handpads during reset.

Ties: If a tie occurs, make sure the buzzer sounded. If it didn't, the tie was caused by two or more quizzers responding while reset was pushed, so the display is not valid.

NOTES

For longest life of the handpads, take care of their wires - avoid excessive bending and pulling.

Replacement AC adapters can also be purchased at Radio Shack (Part # 273-1652, either polarity).

If a problem occurs, please call first; many things can be fixed over the phone or by sending you a part. Payment for return postage and handling (presently \$7.00) will be required if you send a box for repair under warranty.

WARRANTY

2 years on the quizbox and handpads. That does not include cosmetic damage, user modifications or abuse.

90 days on the AC adapter and briefcase (if purchased). (No workmanship is involved on my part, and I can't control how you treat them.)
